

RURAL MUNICIPALITY OF ROSEDALE

L.U.D. OF KELWOOD

NOTICE OF HYDRANT FLUSHING

Please be advised that the municipality will be conducting flushing of fire hydrants on Kelwood Public Water System during

May 21, 2024.

How will it affect me?

During this time, you may notice discoloration or cloudy appearance in your water and the water pressure may drop especially when work is being done in your immediate neighborhood. In particular, we encourage water users to check their cold water for discoloration prior to using water for cooking, use in automatic washers and dishwashers. Once the hydrant flushing is complete, the water quality will improve.

Why do we flush hydrants?

The municipality flushes the fire hydrants to clean out iron deposits in the water lines, to verify the hydrants are properly working and to assure continued high quality drinking water. This process also provides the Fire Department and Water Treatment Plant with valuable information.

If you should have any questions or concerns about the hydrant flushing process, please contact the Municipal office at 204-476-5414.

Thank you for your cooperation.
